

A 3D architectural rendering of the Muskrat Falls Hydroelectric Generating Facility, viewed from downstream. The image shows a large concrete spillway structure with multiple bays, each equipped with a gate. To the left of the spillway is a long, low-profile powerhouse building with a flat roof and several windows. A yellow crane is visible on the roof of the powerhouse. The facility is situated in a valley with steep, forested hills in the background. The water in the reservoir is a deep blue, while the water flowing over the spillway is white and turbulent. The foreground shows the rocky and scree-covered slopes of the downstream area.
